RE: problem with search request for SN 09/851,494

OK, let's modify the search. I need a search of nucleotides 5500 to 7000 and 9000 to 9200 of SEQ ID NO:1, which contain specifically claimed diagnostic mutations outside of a coding region, as well as nucleotides 400 to 1500 of SEQ ID NO:2, which appears to be a coding region within SEQ ID NO:1 and which contains seven additional diagnostic mutations. If this presents a problem, I can divide SEQ ID NO:2 into fragments containing the specifically recited mutations.

US-09-828-466-6

Sequence 6, Application US/09828466

Patent No. US20020035056A1

GENERAL INFORMATION:

APPLICANT: Curtis, Rory A.J.

APPLICANT: Silos-Santiago, Immaculada

TITLE OF INVENTION: 54420, A NOVEL HUMAN CALCIUM CHANNEL

FILE REFERENCE: MNI-125CP

CURRENT APPLICATION NUMBER: US/09/828,466

CURRENT FILING DATE: 2001-04-06

PRIOR PILING DATE: 2000-04-07

NUMBER OF SEQ ID NOS: 7

SOFTWARE: Patentin Ver. 2.0

LENGTH: 966

TYPE: PRT

ORGANISM: Homo sapiens

sednence

```
AAF81741 to AAF81777 encode the human membrane associated proteins

(MEMAP) given in AAB74695 to AAB74731. MEMAPs have cytostatic,
antiinflammatory, anticonvulsant, immunosuppressive, antidiarrheic and
antiarteriosclerotic activities, which can be used in gene therapy.

C antiarteriosclerotic activities, which can be used in gene therapy.

CC MEMAPs and agonist of MEMAPs can be used to treat a disease or condition
associated with decreased expression of functional MEMAP and antagonists

CC MEMAP are used to treat a disease or condition associated with

CC MEMAP are used to treat a disease or condition associated with

CC proliferative, autoimmune/inflammatory, neurological and gastrointestinal

CC proliferative, autoimmune/inflammatory, neurological and gastrointestinal

CC disgnosis of these disorders. Specific examples of these disorders

CC diagnosis of these disorders. Specific examples of these disorders

Include cancer, inflammation, atherosclerosis, epilepsy and diarrhoea.

CC miclude cancer, inflammation, atherosclerosis, epilepsy and small

MEMAP proteins can be used to screen for compounds which specifically

CD bind MEMAP including antibodies, oligonucleotides, proteins and small

MORIGINATE Adisorder associated to provide information concerning human

CC detection of MEMAP protein and can be used as antagonists to treat or

CC prevent a disorder associated with MEMAP. Polymucleotides encoding MEMAP

CC prevent a disorder associated with MEMAP. Polymucleotides encoding MEMAP

CC prevent a disorder associated with MEMAP. Polymucleotides encoding MEMAP

CC prevent a disorder associated with MEMAP. Polymucleotides encoding MEMAP

CC prevent a disorder associated with MEMAP. Polymucleotides encoding MEMAP

CC prevent a disorder associated with respect to the expression of MEMAP to treat or prevent a disorder associated

CC prevent a disorder associated of the provide and provide associated and provide and provide associated of the expression of MEMAP to treat or prevent a disorder associated of the meman
                                                                                            Isolated polypeptide with a human membrane associated protein is useful for the diagnosis, prevention and treatment of cell proliferative, autoimmune/inflammatory, neurological and

The invention relates to a novel transient receptor potential (TRP)-like calcium channel, designated TLCC-2 and polynucleotides encoding the TLCC-2. TLCC-2 can be expressed by standard recombinant methodology. The TLCC-2 polypeptide, polynucleotides and modulators are useful for treating central nervous system disorders such as neurodegenerative disorders for example Alzheimer's disease, Parkinson's disease, multiple clerosis, amyotrophic lateral sclerosis, progressive supranuclear palsy, cepilepsy, Creutzfeldt-Jakob disease, AIDS-related dementia, familial infantile convulsions, paroxysmal choreoathetosis, psychiatric disorders such as depression, anxiety, schizophrenia, psychoses, mania or phobic disorders, learning or memory disorders such as amnesia, age-related memory loss, or a neurological disorder such as migraine. The molecules are also useful to treat a pain disorder. The present sequence represents

The present invention relates to the protein and coding sequences of human transient receptor potential (TRP)-like calcium channel protein-2 (TLCC-2). The sequences can be used in the treatment of TLCC-2 related disorders, including central nervous system disorders such as Alzheimer's, Parkinson's and Huntington's diseases, multiple sclerosis, Gilles de la Tourette's syndrome, autonomic function disorders, learning or memory disorders, pain disorders and disorders of cellular proliferation, including cancer. The present sequence is the TLCC-2 protein.

SCI INC (HUMA-) HUMAN GENOME

Rosen CA; GB, Birse

WPI; 2002-122018/16 N-PSDB; ABL90358.

ed polypeptides, useful for diagnosis, treatment and ral, immune system, muscular, reproductive, pulmonary, cardiovascular, renal and proliferative neural 1405 isolated prevention of neur gastrointestinal, disorders Novel

Claim 11; SEQ ID NO 2325; 2081pp + Sequence Listing; English.

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.

diagnostic and Human secreted proteins and coding sequences useful in diagenterapeutic methods for disorders such as immune system or proliferative disorders, related to the proteins

Claim 11; Page 362-363; 416pp; English

The polynucleotide sequences given in AAB18851 to AAA19088 encode the human secreted proteins given in AAB18891 to AAB18984. The human secreted proteins given in AAB18891 to AAB18984. The human secreted proteins can have activities based on the tissues and cells they are expressed in Examples of the activities are: cytostatic; anti-proliferative; immunosuppressive; antibacterial; and vulnerary. The secreted proteins and their related polynucleotide sequences are useful for diagnostic and therapeutic methods useful for diagnosing and treating disorders related to the secreted proteins. The proteins, and polynucleotide sequences may be useful for treating disorders of the immune system, hyperproliferative disorders, infectious disease, companeration of tissues, for chemotaxis and for screening molecules that bind to the proteins. The proteins or polynucleotide sequences may be used as food additives or preservatives, to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, co-factors or other nutritional components. ```
The present invention describes primer sets for synthesising 5602
tull-length cDNAs defined in the specification. Where a primer set
cumprises: (a) an oligo-dT primer and an oligonucleotide complementary
comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of
the solidonucleotide sequences defined in the specification, where the
coligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5' end
sequence and an oligonucleotide comprising a sequence complementary to a
complementary strand of a polynucleotide which comprises a 3' end sequence.

Complementary strand of a polynucleotide which comprises a 5' end
sequence and an oligonucleotide comprising a sequence complementary to a
coligonucleotide which comprises a 3' end sequence, where the
coligonucleotide comprises a 1 least 15 nucleotides and the combination of
the 5' end sequence/3' end sequence is selected from those defined in
the specification. The primer sets can be used in antisense therapy and
in gene therapy. The primers are useful for synthesising polynucleotides,
colligonucleotide comprises of the abnormality of the proteins encoded by
colligonucleotide comprises and sequences; AAH3628 and
AAH3633 to AAH18742 represent human cDNA sequences; AAH9366 to AAH3622
ceptesent oligonucleotides, all of which are used in the exemplification
of the present invention
                                                                                                                                                                              Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                        ы

This invention describes novel polypeptides, termed NOVX which have antidiabetic, antiarteriosclerotic, anorectic, metabolic, antimicrobial, neuroprotective, antiparkinsonian, antilipaemic, cytostatic, nootropic, cardiant and immunomodulatory activity. The polypeptide and any antibodies generated from it are useful in the manufacture of a antibodies generated from it are useful in the manufacture of a andicament for treating a syndrome associated with the NOVX polypeptide. Fragments selected from a pathology associated with the NOVX polypeptides are useful to map the location of NOVX genes on a chromosome, to identify individuals from minute biological samples, as DNA markers for restriction fragment length polymorphism (RFLP), and are useful to prepare polymerase chain reaction primers. The products of the invention prepare polymerase chain reaction primers. The products of the invention disease, and used in gene therapy and for treating cardiomyopathy, metabolic disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, and various dyslipidaemias, metabolic disturbances associated with obesity, metabolic syndrome X and wasting disorders associated with chronic diseases and various cancers. ABU12041-ABU12086 represent the polypeptide fragments encoded by the NOVX polynucleotides represented in ABX56261-ABX56306.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ŝ

This invention describes novel polypeptides, termed NOVX which have antidiabetic, antiarteriosclerotic, anorectic, metabolic, antimicrobial, neuroprotective, antiparkinsonian, antilipaemic, cytostatic, nootropic, cardiant and immunomodulatory activity. The polypeptide and any antibodies generated from it are useful in the manufacture of a medicament for treating a syndrome associated with a human disease selected from a pathology associated with the NOVX polypeptides. Fragments and portions of the polynucleotides encoding NOVX polypeptides are useful to map the location of NOVX genes on a chromosome, to identify individuals from minute biological samples, as DNA markers for restriction fragment length polymorphism (RFLP), and are useful to prepare polymerase chain reaction primers. The products of the invention disoners, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, parkinson's disease, immune disorders, haematopoietic disorders, and various disease, immune disorders, haematopoietic disorders, and various dyslipidaemias, metabolic disturbances associated with chronic diseases and various cancers. AbU12041-ABU12086 represent the polypeptide fragments encoded by the NOVX polynucleotides represented in ABX56261-ABX56306. 37 155 215 Sequence 97 97 $\overset{\times}{\times} \overset{\circ}{\circ} \overset{\circ}$ 셤 ò d δ ð δ NOVX; human; antidiabetic; antiarteriosclerotic; anorectic; nootropic; metabolic; antimicrobial; neuroprotective; antiparkinsonian; cardiant; antilipaemic; cytostatic; immunomodulatory; gene therapy; dyslipidaemia; cardiomyopathy; metabolic disorder; diabetes; atherosclerosis; obesity; anorexia; neurodegenerative disorder; Alzheimer's disease; cancer; Parkinson's disease; haematopoietic disorder; metabolic disturbance; metabolic syndrome X; wasting disease. f polypeptide useful for treating cardiomyopathy, metabolic disorders, diabetes, obesity, infectious a, neurodegenerative disorders, Alzheimer's disease and atherosclerosis, m disease, anorexia, cancer New isolated NOVX

425pp; English. Claim 1; Page 111;

antidiabetic, antiarteriosclerofic, anorectic, metabolic, antimicrobial, neuroprotective, antiparkinsonian, antilipaemic, cytostatic, nootropic, cardiant and immunomodulatory activity. The polypeptide and any antibodies generated from it are useful in the manufacture of a medicament for treating a syndrome associated with a human disease selected from a pathology associated with the NOVX polypeptide. Fragments This invention describes novel polypeptides, termed NOVX which have

NOVX; human; antidiabetic; antiarteriosclerotic; anorectic; nootropic; metabolic; antimicrobial; neuroprotective; antiparkinsonian; cardiant;

and portions of the polynucleotides encoding NOVX polypeptides are useful to map the location of NOVX genes on a chromosome, to identify individuals from minute biological samples, as DNA markers for restriction fragment length polymorphism (RFLP), and are useful to prepare polymerase chain reaction primers. The products of the invention can be used in gene therapy and for treating cardiomyopathy, metabolic disorders, diabetes, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, and various disease, syndrome X and wasting disorders associated with chronic diseases and various cancers. ABUI2041-ABUI2086 represent the polypeptide fragments encoded by the NOVX polynucleotides represented in ABX56261-ABX56306.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      452

olypeptide useful for treating cardiomyopathy, tabolic disorders, diabetes, obesity, infectious neurodegenerative disorders, Alzheimer's disease and me atherosclerosis, m disease, anorexia, isolated NOVX cancer

425pp; English Claim 1; Page 110;

antidiambetic, antiarteriosclerotic, anorectic, metabolic, antimicrobial, neuroprotective, antiarteriosclerotic, anorectic, metabolic, antimicrobial, neuroprotective, antiparkinsonian, antilipaemic, cytostatic, nootropic, cardiant and immunomodulatory artilipaemic, cytostatic, nootropic, antibodies generated from it are useful in the manufacture of a medicament for treating a syndrome associated with a human disease selected from a pathology associated with the NOVX polypeptide. Fragments of the polynucleotides encoding NOVX polypeptides are useful to individuals from minute biological samples, as DNA markers for restriction fragment length polymorphism (RFLP), and are useful to prepare polymerase chain reaction primers. The products of the invention can be used in gene therapy and for treating cardiomyopathy, metabolic disorders, diabetes, atherosclerosis, obesity, infectious disease, parkinson's ribes novel polypeptides, termed NOVX which have This invention descri antidiabetic, antiart neuroprotective, anti cardiant and immunomo

dyslipidaemias, metabolic disturbances associated with obesity, metabolic syndrome X and wasting disorders associated with chronic diseases and various cancers. ABU12041-ABU12086 represent the polypeptide fragments encoded by the NOVX polynucleotides represented in ABX56261-ABX56306. 9 232 154 214 509 569 96 68 EDLRRRLKYFFMSPCDKFRAKGRKPCKLMLQVVKILVVTVQLILFGLSNQLAVTFREE DPWINGSGLALCORYYHRGHVDPANDTFDIDPMVVTDCIOVDPPERPPPPPSDDLTLLES FVGFWWRQRGRVISLWERLEFVNGWYILLVTSDVLTISGTIMKIGIEAKNLASYDVCSIL NTIAFRHIFLIGYSDGADDTF--AAYTREQLYQAIFHAVDQYLALPDVSLGRYAYVRGGG SSSYKNLTLK-----FHKLVNVTIHFRLKTINLOSLINNEIPDCYTFSVLITFDNKAHSG RIPISLETOAHIQECKHPSVFQHGDNSFRLLFDVVVILTCSLSFLLCARSLLRGFLLQNE LGTSTLLVWVGVIRYLTFFHNYNILIATLRVALPSVMRFCCCVAVIYLGYCFCGWIVLGP YHVKFRSLSMVSECLFSLINGDDMFVTFAAMQAQQGRSSLVWLFSQLYLYSFISLFIYMV LSLFIALITGAYDTIKHPGGAGAEESELQAYIAQCQDSPTSGKFRRGSGSACSLLCCCGR Gaps 32; 540; Length Indels Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CSILLGTSTLLVWVGVIRYLTFFHNYNILIATLRVALPSVMRFCCCVAVIYLGYCFCGWI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human acid sequences of the invention.

The present sequence representing human TANGO 480 is isolated from cDNA clone jthka173a09 from a human keratinocyte cDNA library.

TANGO 480 is 1 of 4 novel human transmembrane proteins which also includes TANGO 315 (AAU006502-AAU006499), TANGO 330 (AAU00500-AAU00501),

and TANGO 437 (AAU00502). The nucleic acids encoding these proteins or useful as modulating agents in regulating a variety of cellular processes and can be used to express the proteins in a host cell in gene therapy applications. Antisense nucleic acid molecules and expression vectors containing the TANGO nucleic acids are also described. Diagnostic assays can be used to detect genetic alterations in the TANGO nucleic acids and to identify compounds that bind to or modulate activity containing the TANGO antibodies are used diagnostically to monitor protein levels in tissue as a clinical testing procedure.

TANGO 480 nucleic acids and proteins may be used to diagnose, treat and monitor keratinocyte disorders e.g. squamous cell carcinoma, keratitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic, immunosuppressive, nootropic, neuroprotective, antiviral, antiallergic, hepatotropic, antidiabetic, antinflammatory, antiulcer, vulnerary, anticonvulsant, antibacterial, antifungal, antiparasitic, cardiant, gene therapy, cancer, immune disorder, cardiovascular disorder,

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MWRQRGRVISLWERLEFVNGWYILLVTSDVLTISGTIMKIGIEAKNLASYDVCSILLGTS
